A. Description of Epigenetics. The term "epigenetics" was first introduced in 1942 by Conrad Waddington to describe the interactions of genes with their environment, which bring the phenotype into being. 3 Today, epigenetics refers to modifications of the genome that do not involve a change of DNA sequence (i.e., the A's, C's, G's and T's that code information in DNA). 4 Until ...

Most cultures in the world have embraced a meat-eating lifestyle, as has been the case since agriculture became a prominent food supply thousands of years ago. Modern agriculture is now the number one contributor to a variety of factors that impose hazards to the environment, including and not limited to, an increase in rates of methane and CO2, overconsumption of water, overuse of land ...

Environmental Impact of Meat Consumption | Open Case Studies

Sustainability is a normative concept that stresses intergenerational equity and is commonly considered to have three dimensions (also called pillars): the environmental, economic and social dimension. The concept can be used to guide decisions at all scales: at the global, national and individual consumer level scale. A closely related and overlapping concept is that of sustainable development.

This is both an environmental problem and a financial problem for farmers who must now revert to spending more on herbicides and labor costs to till the land [10]. While Roundup Ready crops themselves have not caused environmental damage, they are certainly responsible for the Roundup-intensive weed management practices that have accompanied them.

Why Roundup Ready Crops Have Lost ... - Science in the News

Biodegradation is the biologically catalyzed modification of an organic chemical's structure. However, this modification can be through different metabolic pathways and does not necessarily mean a reduction in toxicity. Mineralization, one type of biodegradation, is defined as the conversion of an organic substance to its inorganic constituents, rendering the original compound harmless.
