Black-billed Magpies are familiar and entertaining birds of western North America. They sit on fenceposts and road signs or flap across rangelands, their white wing patches flashing and their very long tails trailing behind them. This large, flashy relative of jays and crows is a social creature, gathering in numbers to feed at carrion. They're also vocal birds and keep up a regular stream ...

### Black-billed Magpie Life History - All About Birds

New, highly detailed and rigorous maps of bird biodiversity could help protect rare or threatened species. Researchers at the University of Wisconsin–Madison developed the maps at a fine-enough resolution to help conservation managers focus their efforts where they are most likely to help birds — in individual counties or forests, rather than across whole states or regions.

### Nationwide maps of bird species can help protect biodiversity

The deeper the water, the faster the tsunami. In the deep ocean, tsunamis are barely noticeable, but they can move as fast as a jet plane, more than 500 mph. As they enter shallow water near land, they slow to approximately 20 or 30 mph, which is still faster than a person can run. Speed of tsunami waves compared to common means of transportation.
