sight (Hájek 2001). After all, logic is concerned with absolutely certain truths and inferences, whereas probability theory deals with uncertainties.

Furthermore, logic offers a qualitative (structural) perspective on inference (the deductive validity of an argument is based on the argument's formal structure), whereas probabilities are

quantitative (numerical) in nature.

Logic and Probability (Stanford Encyclopedia of Philosophy)

The aim of a probabilistic logic is to combine the capacity of probability theory to handle uncertainty with the capacity of deductive logic to exploit structure of formal argument. The result

Read Free Probability Theory The Logic Of Science Et Jaynes

is a richer and more expressive formalism with a broad range of possible application areas. Probabilistic logics attempt to find a natural extension of traditional logic truth tables: the results they define are derived through probabilistic expressions instead. A difficulty with probabilistic logics is th

of Harold Jeffreys (1939) and realizing that his viewpoint makes all the problems of theoretical physics appear in a very different light. But then, in quick succession, discovery of the work of R. T. Cox ...

PROBABILITY THEORY THE LOGIC OF SCIENCE

Read Free Probability Theory The Logic Of Science Et Jaynes

Probability theory, a branch of mathematics concerned with the analysis of random phenomena. The outcome of a random event cannot be determined before it occurs, but it may be any one of several possible outcomes. The actual outcome is considered to be determined by chance. The word probability has several
