The Bond: Connecting Through the Space Between Us with ...

Electrochemistry, absorption spectroscopy, VT-ESR spectroscopy, and DFT calculations reveal that 3.+ and 4.+ are classified into class II and class I mixed-valence systems, respectively, and therefore, through-bond and through-space mechanisms are dominant for the ICT/IST phenomena in 3.+ and 4.+ , respectively.

Recognizing Through-Bond and Through-Space Self-Exchange ...

The conclusion is that electronic coupling between the two metal centers occurs through the bonds of the organic linker, and through-space coupling is less important. In addition, the observation that mixed-valence para-Fe²⁺ is delocalized shows

that electron localization in meta-Fe2 is not determined by interactions with the Au(111) substrate or the position of neighboring solvent molecules or ...

Through-bond versus through-space coupling in mixed ...

We show that for naphthalene-bridged biscobaltocenes with competing through-space and through-bond pathways, the consequences of pinching are far less intuitive: despite the known dominance of through-space interactions, the bridge plays a much larger role for exchange spin coupling than previously assumed.

Controlling Through-Space and Through-Bond Exchange

...

The Bond proves that we are weak when we compete, and thrive only when we cooperate and connect deeply with each other. In this seminal book for our age, McTaggart also offers a complete

AFM image of 1,5,9-trioxo-13-azatriangulene and its chemical structure. A molecule is an electrically neutral group of two or more atoms held together by chemical bonds. Molecules are distinguished from ions by their lack of electrical charge.. In quantum physics, organic chemistry, and biochemistry, the distinction from ions is dropped and molecule is often used when referring to polyatomic ions.
